

Two Ways to put addons onto Discord (Windows)

WARNING: This Can Get your account banned

Requirements: A Pc (Windows) with Discord (not in google chrome), Web Browser

Note: You can only use one of the ways at once, they aren't compatible.

Better Discord (Recommended):

1. Download Better Discord: [link](#)
2. Run the newly Downloaded Exe File
3. Allow Better Discord to Make changes (if it asks)
4. Open Discord Browser(can't be on google Chrome)
5. Go to settings (in discord)
6. Scroll down And Find the better discord section
7. Open a New Google tab(or whatever preferred search engine) and go back to the better discord website(use link above again). Some addons were taken down. So I recommend you search for some on google.(Like the Fake Nitro Addon.)
8. Go to the top and press addons or themes.
9. Browse the themes or addons until you find one you want. Then click on it.(I recommend PluginRepo first, this will allow you to download addons in the discord browser)
10. Download the Addon(s) you want.

11. Go back to the discord Browser.(be sure to be in the same spot as shown above in step 5 and 6)
12. Press Plugins and the “open Plugins folder” button
13. Take your downloaded files and transfer them into the newly opened folder.
14. Go back to the discord Browser and Turn on all the addons you want.
15. Refresh the Discord Browser.

Vencord:

1. Go to this Link :[Link](#)
2. Press Download.
3. Run the newly Downloaded Exe File
4. Force Windows to run anyway
5. Select the version you’re going to patch
6. Press install
7. Open discord after you get the success message
8. Go to user settings
9. Go to the Vencord tab and press Plugins
10. The plugins are pre-installed, just enable them.
11. Refresh The Discord
