Tips / Tricks

- If you want AI, use <u>poe.com</u>.

Exploits / Bypasses

Various ways to disable extensions

[Github link](#)

ChromeBox Tool

This exploit is used to have a proxy app. It can be used to unblock websites.

REQUIRED:
- Unblocked GitHub
- MIT AI2 Companion on the Play Store (If it isn't there, ask your administrator to unblock it. It's an app to help with coding.)
- Unblocked MIT App Inventor website

STEPS:
1. Go <u>here</u>. It will take you to the ChromeBox GitHub repository.
2. Go to the Google Play Store.
3. Search "MIT AI2 Companion".
4. Go <u>here</u>. It will take you to the MIT App Inventor website.
5. Sign into your account.

6. Go to the GitHub repository and click the green "Code" button.

7. Click "Download ZIP"

8. Unzip the files.

9. Go back to the MIT App Inventor website and on the top click "Projects", then "Import project .aia from your computer"

10. Import "chromebox (3).aia".

11. Name your project whatever.

12. Open your newly made project.

13. On the top, click "Connect" then "Chromebook".

14. It will open the project in the MIT AI2 Companion app.

15. Click "Web browser".

16. Done!

V.O.R.T.E.X.

Stands for Vulnerability Override Remote Takeover EXploit.

Currently in development.

Google Translate (NOT WORKING)

This exploit is used to go to blocked websites using a translation feature. Does not work anymore.

REQUIRED:

- Google Translate

STEPS:

1. Get the link to any website you want.

2. Put it into the box on the left.

3. Translate to English.

4. Press the link on the right that will appear.

Powerwash Chromebook (Not Recommended)

This Factory reset Feature can (And most likely will) get you in trouble
We at Ram Networks are NOT responsible for what may happen when you do this!

REQUIRED:

- Chromebook

STEPS:

1. Press ESC + Restart + Power
2. Press CTRL + D
3. Press Enter
4. Press SPACE
5. Press Enter
6. Your Chromebook will restart, Now you're done!

F.A.Q. / Guide

What is a bookmarklet and how do I use it?

Making Bookmarklets

What is a proxy?

A proxy is a website or application that connects to a server and intercepts its data, providing a more secure, free browsing experience. Here, they are used to access a blocked website. They are similar to a web browser in your web browser.

Is all of this okay to do?

Yes, as long as you do not make it an annoyance. Do not use the hacks to cheat in any game at school. Keep things fair. We are not responsible for anything negative that comes from this and will not take the blame for it.

Who are you?

We are an anonymous group of students, known only by the name "Ram Networks".

Can I share something with you/put it on the doc?

Yes, as long as it contains no malware. Submit it here.

Where to report a bug?

Please report it here. If anyone can read this, Type "JrePsF" into Slack if you can.

What to do when you are confused?

This doc can be complicated. All info needed can be found easily.

How do I create a bookmarklet?

1. Type chrome://bookmarks/ in the URL bar.
2. Click the three dots in the top right corner.
3. Click Add new bookmark.
4. Name the bookmarklet anything you want.
5. Copy/paste the code into the URL box.
6. Click Save.
7. Click the new bookmarklet to test it. You may need to be on the correct website for it to work.

For a more in-depth look at bookmarklets, see <u>Making Bookmarklets</u>.

How do I install the Blooket hacks?

This method will import all bookmarklets. I'll be using the Minecraft2 hacks for now.

1. Go to the page with your hacks (Find them in Game Hacks).
2. Click *unobfuscated*.
3. Click *bookmarklets.html*.
4. Click *Download*.
5. You should see a black background with white code. Click the three dots in the top right corner of the window.
6. Press CTRL+S.
7. Save the .html file.
8. Go to *chrome://bookmarks*.
9. Click the three dots in the top right corner.
10. Click *Import bookmarks*.
11. Select *bookmarklets.html*.
12. The bookmarklets should be in the *Imported* folder. You can move them to wherever you want.

The proxy I use is blocked!

Try making your own with ▶ *How to make your own proxy's using replit!*

This guide requires you to make a Replit account.

The proxy says "Run this Repl to see the results here".

Ignore it. Try a different proxy. If you have experience, deploy it via Replit.

What is this doc for?

Imagine that you're bored in class. You try to go to a game website, but Cisco Umbrella, securely or a different security system, thinks it'll steal your data or your school blocks it and won't let you use it. This doc is trying to avoid that by providing you with a safe, easy way to understand proxies and their many uses.

What is an emulator?

Well, it's a way to play games from consoles (NES, SNES etc.) on a device that is not meant to run that game. It emulates that console.

Terms Of Service
